Blockchain and You

Bringing the power back to Humanity

Welcome to Block-Chain

Cryptocurrency Technology is the boom of the 2020's a system built by the concept of blockchain - an idea that all information can be decentralized to provide a shareable ledger where transactions are visible to all members of the blockchain

Bitcoin is one of the most famous cryptocurrencies which started at $0.0025 and has now risen to nearly 70k

The value of bitcoin is built by trading and mining the coin through proof-of-work algorithms building up blocks of the chain that encapsulate the entirety of the B-C

Where do I fit in?

Up until today cryptocurrency has been like a dog race, where you pick a winner based on your own research and feelings to bet on and some people come out as winners while others fall to the FOMO pump&dumps that systematically rob retail investors - or individuals managing their own assets - or you.

The BC being implemented by us is based on user input as the building blocks, and the agreement of multiple users create chains that bring value to these blocks, not just whoever has the fanciest computer tech to mine by brute force and use of electricity and bandwidth.

Your blocks in the chain

The point of this blockchain is to recreate the entirety of the structures we live in as a society including jobs, school, and local communities in order to represent the consent of the individuals in them.

Often communities resources are hoarded for the use or distribution of the authorities in power, the decision makers. Through the use of this BC organization and deliberate redistribution of authority, we allow the majority of the population to make the decisions that affect them directly.

Meaning

In school all the children agree that homework should be optional as the time they get at home is best used for their own personal hobbies. The school system holds the authority to assign hw because through repetition, it is possible for students to recall the information being studied in order to increase passing scores on state exams and increase school budgets accordingly.

The happiness of the student body, the largest numerated population affected, is put second to the financial gain of the school, putting the system before the person.

With Blockchain the majority's decision to not participate in HW is the priority, meaning that this becomes the immutable law for this school system and that is what they must work around or else the students have the option to withdraw from school and participate in other learning structures that dont rely on a central authority to guide them

Repercussions

Through dealing with this small population we learn a couple of things

1) Power is not in the hands of the people who it governs
2) When given the freedom of choice people choose freedom
3) Test scores may dip but student satisfaction levels will continue to rise if the wants of the students come together to reflect the ideal learning environment for the collective student body.
4) Standardized Tests may no longer be the measure to gauge a students intelligence; promoting liberty of students may promote creativity, talents may begin to showcase through the freedom of choosing focus areas of learning that the students are interested in becoming fluent in, STEM arts or other

This is about school?

No. If the same system of BC was implemented in a workplace, the workers could come together to agree lunches should be longer, pay should be higher, hours should be shorter and more flexible, all things that can affect the overall stockpile of wealth the employer holds but may increase productivity and worker satisfaction leading to a more community driven sense of the success of the company.

Through uniting everyone in the workplace the people in charge of keeping hierarchies of rules and policies before human emotion would be made obsolete, the individual's workers minds' are given room and the stage to suggest improvements for the company or give advice that can make other people's jobs easier. Through the singularity of information flow created in uniting the people's voice to represent themselves the structures of greed dissipate leaving only room for collaboration.
